

Redirecting the Homepage

As the Dashboard is annoying irritating to change in Confluence, hence Atlassian has an idea that the Layouts can only be changed if the "Default Theme" is selected, I do use another space's Home as the frontpage (e.g. Dashboard)

Unfortunately, even though the Page are assigned in the Administration > General Configuration:

Dashboard > Administration > General Configuration

Configuration

General Configuration

Backup Administration

Manage Referrers

Plugins

Plugin Licensing Manager

Languages

Shortcut Links

External Gadgets

Global Templates

Local Templates

Site Configuration

Configure the appearance and behaviour of the site as a whole. The most in be set to the externally-accessible address of your Confluence site.

Site Title **Mos-Eisley.dk**

Server Base Url **http://www.mos-eisley.dk**

Site Homepage **public**

Site Welcome Message

people (users) can still access the /dashboard.action URL, either by a bookmark - or because the Dashboard breadcrumb actually points to it.

To always redirect them to the correct Page, I have used the [Redirection](#) Plugin and put this in the Site Message:

```
{redirect:Public:Home}
```

So as soon as the /dashboard.action Url are loaded, the browser gets redirected to /display/public/Home
