Dansk

Velkommen til Mos-Eisley.dk - bygget på Confluence fra Atlassian.com .

Confluence er et interessant og stabilt system (kaldet en Enterprise Wiki) med en masse udvidelser, og kan principielt drives i skyen for \$10 /måned hvilket absolut er latterligt billigt. Læs evt. [Confluence as a Homepage CMS](#)

Ved hosting i skyen er der enkelte funktioner og ting man fraskriver sig, bla. nogle 3. parts plugin, alternativet er at drive det selv på en server.

Se [Restricted functions in Atlassian Cloud apps](#) og [Restricted functions in Confluence Cloud](#)

Her forsøger jeg på en gang at samle de gode tips jeg har til Confluence, med information omkring opbygningen af sitet.

Welcome to Mos-Eisley.dk - Built with Confluence from Atlassian.com.

Confluence is an interesting system (known as an Enterprise Wiki) - very stable and with a lot of 3rd party plug-in possibilities, and can be driven for as little as \$10 a month in the cloud. Read [Confluence as a Homepage CMS](#)

An onDemand (cloud based) has some restrictions regarding functions and plugins, as an alternative option, run the product on a "local" server.

Using Confluence with many images on the local filesystem? - Take a look at [Mos-Eisley Gallery](#)
