

Getting a field value in Read Mode

From viewing the source:

```
div id="customfield_10901-val" class="value type-textfield" data-fieldtype="textfield" data-fieldtypecompletekey="com.atlassian.jira.plugin.system.customfieldtypes:textfield">  
  
    servername  
  
</div>
```

its possible to the the field value out.

Here, an alert will show we actually extracted the value:

```
<script language=javascript>  
alert(AJS.$("#customfield_10901-val").text().trim());  
</script>
```
