

# Coloring a Field in Read Mode

This is an extension of the [Getting a field value in Read Mode](#) - this will color the field after the value selected.

This css cant be in the banner, but must be "hidden" in a field, the type could be the "Message Custom Field (for view) from the JIRA Toolkit. To make the changes when documents is ready, the script is "wrapped" into a [document ready](#):

```
<script language=javascript>
AJS.$(document).ready(function()
{
var state=AJS.$("#customfield_11102-val").text().trim();

AJS.$("#customfield_11102-val").css("color", "black");
AJS.$("#customfield_11102-val").css("font-weight", "bold");

if (state == 'RED')
{
AJS.$("#customfield_11102-val").css("background-color", "#ff0000");
}
if (state == 'AMBER')
{
AJS.$("#customfield_11102-val").css("background-color", "gold");
}
if (state == 'GREEN')
{
AJS.$("#customfield_11102-val").css("background-color", "#00ff00");
}
if (state == 'WHITE')
{
AJS.$("#customfield_11102-val").css("background-color", "white");
}

});
</script>
```

Or better, using Lozenges from the [AUI](#) :

```
<script language=javascript>

AJS.$(document).ready(function()
{

var state=AJS.$("#customfield_10621-val").text().trim();

AJS.$("#customfield_10621-val").addClass("jira-issue-status-lozenge");
AJS.$("#customfield_10621-val").addClass("aui-lozenge");

if (state.indexOf('RED') >= 0)
{
AJS.$("#customfield_10621-val").addClass("jira-issue-status-lozenge-blue-gray");
}
if (state.indexOf('YELLOW') >= 0)
{
AJS.$("#customfield_10621-val").addClass("jira-issue-status-lozenge-yellow");
}
if (state.indexOf('GREEN') >= 0)
{
AJS.$("#customfield_10621-val").addClass("jira-issue-status-lozenge-green");
}

});
</script>
```

The possibilities can be reverse engineered from the css files fetched by the browser:

## /download/superbatch/css/batch.css

```

```

To hide the Custom field making the CSS changes on the read form:

```
AJS.$("#rowForcustomfield_11104").hide();
```
