

# Add Button to JIRAs Header

This script will add a Button to the header. Adding Script to JIRA is a bit tricky, simplest solution is to place it in the Banner:

```
<script>
AJS.toInit(function(){
  AJS.$('.mui-header-primary .mui-nav').prepend('<li><a href="http://www.atlassian.com" class=" mui-nav-
imagelink">Atlassian</a></li>');
});
</script>
```

PS: Due to XSS it will not show when You are in the admin section.

If You have [Scriptrunner for JIRA](#), You can do this much better with [Web Items](#)
