

Capturing websites to images etc

For newer Ubuntu

```
sudo apt-get update
sudo apt-get -y install build-essential
sudo apt-get install cutycap
```

For older (like 10.04)

```
sudo apt-get update
sudo apt-get -y install build-essential
sudo apt-get install xvfb
sudo apt-get install xfs xfonts-scalable xfonts-100dpi
sudo apt-get install libgl1-mesa-dri
sudo apt-get install subversion libqt4-webkit libqt4-dev g++

svn co https://cutycapt.svn.sourceforge.net/svnroot/cutycapt
cd cutycapt/CutyCapt
qmake
make
```

Missing X environment?

Use <http://www.x.org/archive/current/doc/man/man1/Xvfb.1.xhtml>

```
sudo apt-get install xvfb
```

Capture the websites

```
./CutyCapt --url=http://www.google.com --out=example.png
./CutyCapt --url=http://www.google.com --out=example.html --out-format=html
```

Or:

```
xvfb-run --server-args="-screen 0, 1024x768x24" ./CutyCapt --url=http://www.google.com --out=example.png
xvfb-run --server-args="-screen 0, 1024x768x24" ./CutyCapt --url=http://www.google.com --out=example.html --out-format=html
```
