

How to make splunk show an Image in a DIV

This is how I made splunk show an URL from a search line in a DIV- from a raw line like this:

```
dirname=2016-04-08 filename=2130032104_motd.jpg
```

In this screenshot, clicking on a "path" shows the camera pic in a div:

First, convert the Dashboard to HTML

Second, Insert the code in a panel:

```
<div><img id=campic name=campic></div>
```

Third, find the table generation and insert a click catcher - use the Console feedback to view the data when clicking...

```
element3.on("click", function(e) {
    // Prevent drilldown from redirecting away from the page
    e.preventDefault();

    // Console feedback
    //console.log("Clicked the table:", e.data);

    //Change the DIVs source
    var campicimg = document.getElementById("campic");
    campicimg.src="http://server.dk/Baghus/" + e.data['click.value2'] + "/" + e.data['click.value3'];
});
```
