Slow Confluence

> UPDATE: The is only a partly truth, unfortunately - its more the restart than the reindex that improved response times...
>
> UDATE 2: After upgrading the Refined add-on and some clean up - this was resolved. Everything points to a memory leaking add-on.

Since upgrading to Confluence 7, my Confluence has been really slow.

And a lot of GC warning about it taking longer than 2000 ms...

So, I eventually stopped confluence, deleted the index and journal on disk according to

https://confluence.atlassian.com/confkb/how-to-rebuild-the-content-indexes-from-scratch-on-confluence-server-110035351.html

and the result on response time was "craaazy"....
