

Home Assistant with Samsung TV

I have 2 Samsung TVs:

[Samsung QE75Q70R](#) i stuen

Samsung UE43AU7105KXXC i soveværelset.

In general I would like both in Home Assistant, but there are a number of integrations:

Built-in Samsung TV Integration

<https://www.home-assistant.io/integrations/samsungtv/>

- Finds both TVs
- Gives a constant approval dialog on the [Samsung QE75Q70R](#)

FAILED

Samsung Smart TV (custom_component/samsungtv_tizen)

<https://github.com/jaruba/ha-samsungtv-tizen>

- I never see this in the "Integration" section
- Seems to work with configuration.yaml entry
- Seems to work with 2 TV's with configuration.yaml entries.
- Limited attribute feedback

SamsungTV Smart (custom_component/samsungtv_smart)

<https://github.com/ollo69/ha-samsungtv-smart>

- Only useable with one TV
- Exposes a lot of TV attributes

IMPROVEMENT NEEDED

```
source_list: TV, HDMI, Netflix, Internet, Viaplay, YouTube, Prime Video, Plex, DRTV, Disney+, Apple
