

Backup af MySQL Databaser

Dette lille script dumper alle MySQL Databaser, og holder et par versioner standby, for let restore:

```
#!/bin/sh
FIND=/usr/bin/find
GZIP=/bin/gzip
MYDUMP=/usr/bin/mysqldump
# find all databases and export them
for i in `(cd /var/lib/mysql/; ${FIND} * -type d -user mysql) 2>/dev/null`; do

    # if old file exists, delete it
    if [ -f /backup/mysqlbackup/${i}.sql.gz.2 ]; then
        mv /backup/mysqlbackup/${i}.sql.gz.2 /backup/mysqlbackup/${i}.sql.gz.3
    fi
    if [ -f /backup/mysqlbackup/${i}.sql.gz.1 ]; then
        mv /backup/mysqlbackup/${i}.sql.gz.1 /backup/mysqlbackup/${i}.sql.gz.2
    fi
    if [ -f /backup/mysqlbackup/${i}.sql.gz ]; then
        mv /backup/mysqlbackup/${i}.sql.gz /backup/mysqlbackup/${i}.sql.gz.1
    fi

    # dump current database
    ${MYDUMP} --lock-tables --user=root --password=***** --databases ${i} | $GZIP > /backup/mysqlbackup/${i}.
sql.gz

done
```
