

iPhone Notifications in Home Assistant

Home Assistant

These both works on iPhone.

```
service: notify.mobile_app_normanns_iphone_12
data:
  title: test
  message: test
  data:
    attachment:
      content-type: jpeg
      url: "https://homeassistant.mos-eisley.dk/local/tmp/front_door_cam_snapshot.jpg"
```

```
service: notify.mobile_app_normanns_iphone_12
data:
  title: test
  message: test
  data:
    image: "/local/tmp/front_door_cam_snapshot.jpg"
```

If You press and hold the small picture in the message, it will be enlarged.

NodeRED

The screenshot shows the NodeRED Properties panel for a 'HA Push' node. The panel includes the following fields and options:

- Name:** HA Push
- Server:** Home Assistant
- Domain:** notify
- Service:** mobile_app_normanns_iphone_12
- Data:** A JSON object: {"title":"Face Detection","message":"Face detected","data":{"image":"/local/deepstack/dee...". Below this is a checkbox labeled "Use alternate template tags for the data field" which is unchecked.
- Merge context:** lightOptions
- Queue:** don't queue messages

Json data:

```
{
  "title": "test",
  "message": "test",
  "data": {
    "image": "/local/tmp/front_door_cam_snapshot.jpg"
  }
}
```
