

Using the Customware Visibility Plugin

It seems that the Visibility plugin behavior can be achieved using standard objects, see <https://confluence.atlassian.com/display/CONFKB/How+to+Display+Different+Appearance+for+Different+Users+Using+Confluence+Layouts>

This Macro should not be used or considered as a security macro.

In the Rich Text Editor (RTE)

Typically, this is the outer Macro, nesting others inside. This sample renders some extra CSS and shows the JIRA macro only to members of "sales-users":

In the Layout(s) for Global, Page, Blog post etc..

Here, another Macro called short-links is only rendered, if the user is member of "sales-users":

```
$helper.renderConfluenceMacro(" {show-if:match=all|group=sales-users} {short-links} {show-if} ")
```

Here, the recently-updated macro is only shown to members of "operation-users":

```
$helper.renderConfluenceMacro(" {show-if:match=all|group=operation-users} {recently-updated:netic|showProfilePic=true|types=blogpost|max=15|theme=sidebar} {show-if} ")
```
