

Grade A Webservices - Apache2

Reference: https://raymii.org/s/tutorials/Strong_SSL_Security_On_Apache2.html

Jeg kunne ikke rigtigt nøjes med NGix fra [Grade A Webservices](#) - da mit PHP så ikke virkede, så der var "fallback" til Apache.

Første inden rettelser:

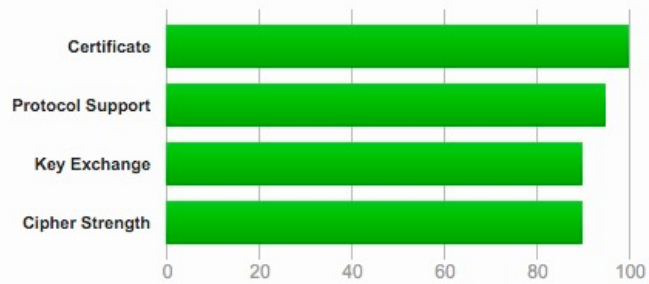

Efter SSL tilretninger:

```
SSLProtocol All -SSLv2 -SSLv3
SSLCipherSuite ECDH+AESGCM:EDH+AESGCM:AES256+EECDH:AES256+EDH
```

Summary

Overall Rating

Visit our [documentation page](#) for more information, configuration guides, and books. Known issues are documented [here](#).

This server supports TLS_FALLBACK_SCSV to prevent protocol downgrade attacks.

Efter "Diffie Hellman Ephemeral Parameters"

Her skal nok lige undersøges om det tager pusten fra serveren - dvs. svartidernes stiger...
